DISHRADAR

02 THE BUSINESS PROBLEM: OVERALL RATINGS HIDE WHAT IS GOING WRONG

A restaurant's overall rating can remain stable even when specific dishes or service areas are declining. Traditional review monitoring focuses mainly on the overall rating and individual reviews. This makes it difficult for managers to identify:

- **Which dish is declining**
- **When the decline started**
- **What customers are complaining about**
- **Whether the issue is temporary or becoming a trend**

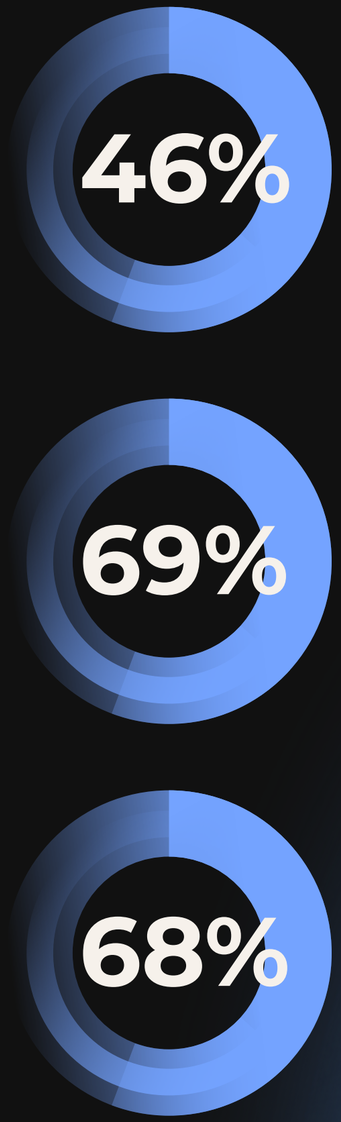

Business need: **Detect problems early enough for managers to take corrective action.**

03

46% OF CONSUMERS WOULD NOT DINE AT A RESTAURANT WITHOUT READING REVIEWS.

69% FEEL MORE POSITIVE ABOUT A BUSINESS WHEN ITS WRITTEN REVIEWS DESCRIBE POSITIVE EXPERIENCES.

ABOUT 68% OF CONSUMERS SAY THEY WILL NOT USE OR CHOOSE A BUSINESS—INCLUDING RESTAURANTS—RATED BELOW A 4.0 STAR THRESHOLD.

04

EVIDENCE: CUSTOMER REVIEWS CONTAIN EARLY WARNING SIGNALS

What the review data can reveal:

- **Customers mention specific dishes and service experiences within their reviews. Negative comments can increase before the overall restaurant rating shows a clear decline. Tracking sentiment over time helps identify whether an aspect is: Improving, Stable, Under watch, Declining**

OUR SOLUTION: DISHRADAR

DishRadar is an early-warning dashboard for restaurant managers.

It converts customer reviews into actionable dish-level and service-level insights.

It answers three key questions:

1. WHAT is declining?
→ Dish or service area
2. WHEN did the decline begin?
→ Sentiment trend and alert history
3. WHY might it be happening?
→ Complaint words and customer comments

Goal: Move from reacting to low ratings → identifying problems early.

HOW THE DASHBOARD SUPPORTS THE DECISION

RADAR

- Compares recent sentiment with the historical baseline.
- Flags dishes/service areas as Alert, Watch, Healthy or Improving.
- Heatmap shows where negative sentiment is concentrated.

DEEP DIVE

- Shows sentiment trend over time.
- Identifies complaint words.
- Provides representative customer comments.

IMPACT

- Shows what the manager would have known at an earlier point.
- Forecasts the next 3 months and estimates alert risk.
- Helps identify potential issues before they become visible in overall ratings.

07 EXAMPLE: CHICKEN DUM BIRYANI

FROM CUSTOMER REVIEWS TO BUSINESS ACTION

The dashboard can identify a decline in sentiment for a specific dish and then show the ***customer language behind the decline***.

Before “Restaurant rating is declining.”

With DishRadar “This dish is receiving increasingly negative feedback.”

TARGETED ACTIONS

- Check recipe and preparation consistency
- Review ingredient quality / supplier
- Find out if it happens during busy shifts
- Monitor the dish after corrective action

RESULT: THE MANAGER INVESTIGATES THE SOURCE OF THE PROBLEM, NOT JUST THE FINAL RATING.

08

BUSINESS VALUE

01 Detect dish-level problems earlier

02 Identify recurring customer complaints

03 Separate food-related issues from service issues

04 Prioritise which problems need attention

05 Use reviews for proactive decision-making

DishRadar turns unstructured customer reviews into an early-warning system for restaurant operations.
